MONTHLY WEATHER MAP

METEOROLOGICAL SERVICE, DOMINION OF CANADA

DECEMBER 1935

TEMPERATURE

The mean temperatures for December were generally below normal in the Atlantic provinces, southern Quebec, Ontario as far west as Lake Superior, in the lower Mackenzie River valley and locally in the prairie provinces. Elsewhere above normal temperatures were reported.

On Vancouver Island, along the British Columbia coast and in the southern river valleys there were excesses of three to six degrees, while in the northern section of the province the mean temperatures ranged from six to twelve degrees above normal.

In Alberta the month was quite mild in the Peace River region, the lower Athabaska River districts, and particularly mild in the extreme southern portion of the province. Between the North and South Saskatchewan Rivers a considerable portion of the agricultural region reported mean temperatures normal or nearly so. Nearly normal mean temperatures characterized also the upper Athabaska River region from the Lesser Slave Lake south to the divide between the Athabaska and North Saskatchewan Rivers. The excess over normal mean temperature in the southern foothills and the valleys of the Bow, Oldman, St. Mary, and Milk Rivers was generally more than five degrees while Cardston, Raymond and other points in the extreme southwestern portion of this region reported excess of eight to ten degrees. Large excess over normal mean temperatures by ten to fourteen degrees appears to have generally occurred in the high valleys from Entrance northward to Beaverlodge.

In Saskatchewan also, the central portion of the agricultural region averaged only normal or slightly below while along the South Saskatchewan River from the Alberta boundary eastward to Moose Jaw and northward towards Saskatoon the month was quite mild with excess of four to six degrees over normal mean temperature. Northward from the North Saskatchewan River towards the Churchill River the few reports yet available indicate excess of four to six degrees. The hilly regions of Wood Mountain, Moose Mountain and of the upper Qu'Appelle and Assiniboine Rivers averaged about normal or slightly below normal.

In Manitoba the region of the Lakes and northeastward to Hudson Bay was three or four degrees above normal but south of the Lakes to the International Boundary most stations reported mean temperatures about normal except in the hilly region of the extreme southwestern corner of the province where some points reported deficiency of one or two degrees.

In the region of the Lake of the Woods and the Rainy River the temperatures averaged normal or slightly below but generally from the north shore of Lake Superior northward to the Albany River and Hudson Bay the month was mild with excess of two or three degrees. From the eastern shore of Lake Superior eastward through Ontario to the Ottawa, Gatineau and St. Maurice Rivers in Quebec the month was more severe than a normal December. The greatest deficiencies were reported from the hilly region between the Ottawa and Upper St. Lawrence rivers and reached eight or nine degrees in the Bancroft-Haliburton area. In the Lake Erie-Lake Huron region deficiencies were about five or six degrees on the interior ridge and about four degrees along the shores. North of Lake Temiskaming the deficiency decreased from three degrees and temperatures averaged normal at the southern end of James Bay.

Although there was a deficiency of five degrees in the Montreal district, temperatures nearer normal were reported downstream on the St. Lawrence. From normal temperatures at Quebec City excess increased eastward to the north shore of the Gulf where excess over normal reached six to eight degrees. The interior of Quebec and the Labrador coast as far as Hudson Strait appears to have had a very mild December with excess of four to nine degrees.

Temperatures in northern New Brunswick were normal to one degree above normal. The central part of the province was practically normal while the St. John River valley and the coast of the Bay of Fundy reported deficiencies of one to three degrees. On Cape Breton Island and in northeastern Nova Scotia temperatures were one or two degrees above normal. From the basin of Minas southwestward to Yarmouth temperatures averaged below normal with deficiency of two or three degrees in the extreme southwest. On Prince Edward Island and the Magdalen Islands temperatures averaged about normal but Sable Island reported two degrees below normal.

The excess over normal temperature on the east coast of Newfoundland ranged from three degrees at Cape Race and Fogo to seven degrees at Belle Isle. On the southwestern tip of Newfoundland temperatures averaged about normal.

Along Hudson Strait excesses of eight to nine degrees were reported and four to five degrees along the western coast of Hudson Bay.

PRECIPITATION

On the greater part of Vancouver Island and along the northern part of the Pacific coast precipitation was slightly above normal. The southern portion of Vancouver Island was generally 15 to 60% below normal with local exceptions. In the southern interior valleys deficiencies of 5 to 50% and 30% generally were reported.

In the north Saskatchewan and the upper Athabaska River valleys precipitation was normal to twice the normal amount and generally 75% above normal. In the Peace River district precipitation ranged from slightly above normal to 40% below. The remainder of Alberta was normal to 75% below and 45% generally.

Precipitation in Saskatchewan for December was quite irregular, being 20 to 100% above normal in the Lloydminster-Biggar district, normal to 75% above in the Rosthern, Saskatoon, Moose Jaw district and normal to 60% above normal in the region from Kamsack southward to the Qu'Appelle River valley. The remainder of Saskatchewan was below normal by 15 to 60% with the largest deficiencies occurring in the Cypress Hills district.

In the lake region in Manitoba precipitation was 15 to 40% below normal. In the Assiniboine and Red River valleys precipitation was normal to 30% above normal and 15% in excess generally. The extreme southwestern corner of the province was about 25% below normal.

Northern Ontario had generally below normal precipitation except locally about Port Arthur and along the northeastern shore of Lake Superior where excesses of about 30% were reported. Elsewhere in Kenora, Rainy River and Thunder Bay districts precipitation was about 30% below normal. In Cochrane, Algoma, Sudbury and Temiskaming districts there were deficiencies of 15 to 50% and 40% generally. Southern Ontario had below normal precipitation except locally along Lake Huron and the extreme tip of the Erie Peninsula where excesses of about 25% were reported. Southwestern Ontario was 10 to 55% below normal and 25% generally while southeastern Ontario was 25 to 70% below normal and 40% generally.

In the Laurentian Hills in Quebec precipitation was 30 to 85% below normal. Along the Ottawa and Gatineau Rivers there were deficiencies of 15 to 50% and 30% generally. Along the lower and middle St. Lawrence River valleys and southward to the United States boundary deficiencies of 30 to 65% were reported and 50% generally. In the Lake St. John region deficiencies of 40% were general while along the lower St. Lawrence and north shore there were deficiencies of 15 to 60%.

In northern New Brunswick there were deficiencies of 25 to 50% and 35% generally while in the central part of the province there were excesses of 10 to 45% and 20% on the average. Along the St. John River precipitation was 15 to 30% below normal. Southwestern Nova Scotia was 10 to 45% below normal and 25% on the average. Along Northumberland Strait and on Cape Breton Island there were excesses of about 30% while the precipitation was 30% above normal on Prince Edward Island.

The northeastern coast of Newfoundland was 5 to 60% above normal while the remainder of the country reported precipitation 15 to 35% deficient from the average.

A. J. CONNOR

SPECIAL REPORTS

NOTE—Column H is Highest Temperature; Column L is Lowest Temperature; Column P is Precipitation in inches; Column I denotes total of bright sunshine in hours during the month; Column Tm is the mean temperature of the current month; Column Sg denotes depth of snow on ground in inches, where given.
